

LE  

Lever Escutcheon Trim

The LE trim is the heaviest duty trim Design Hardware offers. It is equipped with a unique tailpiece (actuator shaft) that is a direct drive design putting all torque straight into the device. This LE trim also features a field-friendly handing solution. This trim is our recommended choice for vertical rod applications. Finish options match those of our 1000 and 2000 series devices.

KIL   / **KIK**

Keyed Lever/Knob - Cylindrical Design

The KIL trim is ideal for most applications because of its ease of installation, lever versatility (works with lever kit options) and functionality. This trim is essentially 1/2 of an X Series lever lock that is equipped with a hardened steel tail piece. The **KIK** is the answer for non-ADA knob trim applications.

TP 

Thumbpiece

The Thumbpiece trim is used on openings where a pull handle is desired, yet requires latching and does not have to meet ADA requirements.

2P 

Pull Trim

The 2P trim provides a clean, traditional look. This trim is an economical choice, and an ideal choice for high use doors that will be dogged down for push/pull applications.

DFP/FP 

Double Finger Pull/Finger Pull

The DFP/FP trim are our most economical choices, while still providing trim control options – for most common low traffic openings that want more than exit only.

 designates designs available with small but interchangeable options (SFIC).
