DETEX®

Anti-Microbial Finish Option
For Advantex Exit Devices

Purpose:

The Detex –AM, Anti-Microbial finish option is designed to reduce the spread of sickness causing germs.

While no single precaution can totally prevent infections, there are many things we can do to reduce spread of germs.

The –AM finish is one tool that helps reduce the amount of germs spread on a commonly touched item, the exit device.

Available on Advantex Exit Devices

To include the Anti-Microbial finish on a Advantex exit device, request – AM as part of your part number.

For example:

7001CV-630-LHR-36"-96"-AM

Finish Options

The Anti-Microbial option is available with all finishes **except for Oil Rubbed Bronze.**

This is because the Oil Rubbed Bronze is a true 613 finish which includes a layer of oil, and oxidized metal that is designed to wear off over time. The 613 finish is designed to give door hardware a naturally aged appearance.

Available finishes include:

605, 606, 611, 612, 625, 626, 628, 629, 630, 693, 695

How Much Will It Cost

There is an increase of **\$92 List** to the price of each exit device that requires the –AM finish.

It's a small price to pay for the additional protection it offers.

Increased Leadtime

The –AM finish option only adds **10 days** (on average) to the production time. This means there is virtually no reason not to include this option with your Advantex exit devices as a standard offering.

Lasting Protection

The Anti-Microbial coating has been designed to last for the life of the exit device. End users will appreciate many years of protection for their staff and guests.

Technology

The Detex –AM finish employs the use of Silver Nano Particles. These have been shown to reliably kill some germs within hours. A controlled release of silver ions continuously offers protection.

Combined with regular cleaning, and other precautions the Detex Anti-Microbial finish will help protect people from becoming sick through contact with commonly touched doors.

Maintenance

Only standard maintenance is required to ensure that the Anti-Microbial finish continues to perform well. A regular cleaning regime with common household disinfectants, and/or sanitizers.

Note: Bleach must not be used.
